

# Ambulance Patient Offload Time Week 52 (12/22/19 – 12/28/19)

2019-20 Seasonal <u>Repo</u>rt

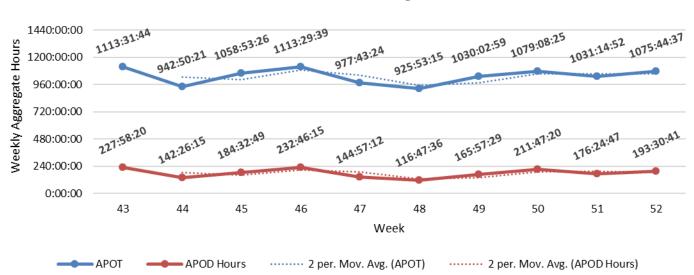

This report and all current and recent APOT reports can be found online at: <a href="http://www.rivcoems.org/Documents/Reports-Current">http://www.rivcoems.org/Documents/Reports-Current</a>

## SPECIAL SEASONAL REPORT

In an effort to monitor seasonal surge in Ambulance Patient Offload Time (APOT) during the 2019-20 Influenza season, Riverside County EMS Agency is publishing weekly reports. The following charts represent weekly aggregate APOT/APOD data for the past 10 weeks, updated weekly.

- During 2019 Week 52, there was a total of **3020 transports in Riverside County** a **2.3%** INCREASE from the previous week's 2953 transports.
- The number of APODs in Week 52 was 636, which is 6.0% ABOVE the previous week's total of 600 APODs.

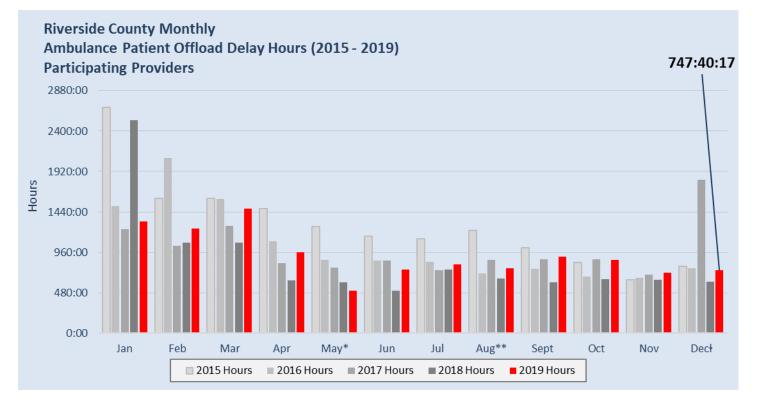

## Weekly APOT and APOD Hours 2019 Weeks 43 through 52

- During 2019 Week 52, APOT county-wide totaled 1075.7 hours —4.3 % ABOVE the previous week's total of 1031.2 hours.
- County-wide APOD hours for Week 52 totaled 193.5 hours, a 9.7% INCREASE from the previous week's total of 176.4 hours.

# RIVERSIDE COUNTY AMBULANCE PATIENT OFFLOAD TIME

The data provided illustrates total ambulance patient offload delay time (hh:mm:ss) by month for 2015 through the current Week 52 from hospitals within Riverside County. To qualify for this chart, the duration of offload delay must be greater than 30 minutes, and only the time period after the first 30 minutes is summed.

Beginning January 2017, offload times represented are measured using time of patient arrival at hospital (eTimes.11) until the time of patient transfer (eTimes.12) as represented on the ePCR (electronic patient care report). This represents a different methodology in offload time measurement. *Prior to January 2017, offload times were calculated using CAD times, beginning with the time that dispatch placed the ambulance on bed delay status until the time the ambulance left the hospital.* 

\*For May of 2016, actual totals may have been slightly higher than are reported due to a 3-day CAD outage. \*\*Beginning August 2017, times represented include all participating providers. Prior to August, data included AMR responses only. **December 2019 is a partial month** 

# APOD AMBULANCE REDIRECTION

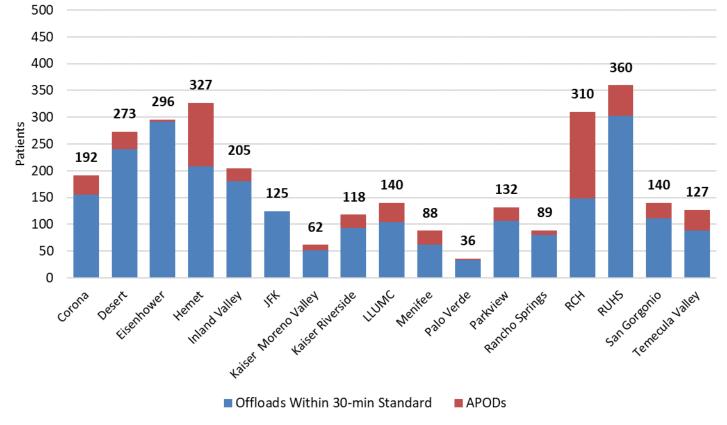

On October 1, 2019, Riverside County EMS Agency activated Policy 6104 (<u>http://www.remsa.us/policy/6104.pdf</u>) to allow redirection of ambulances from hospitals that have extended Ambulance Patient Offload Delay (APOD)--to the closest most appropriate hospital that does not have extended APOD. Extended APOD is a patient remaining on an ambulance gurney for 90 minutes or greater after arrival at a hospital. The table below shows the ambulance diversions that occurred during Week 52.

	Occurrences of APOD	
	Redirection	
Corona Regional Medical Center	1	
Desert Regional Medical Center	1	
Kaiser Permanente Riverside Medical Center	3	
Loma Linda University Medical CenterMurrieta	1	
Riverside Community Hospital	1	
Grand Total	7	

## AMBULANCE PATIENT OFFLOAD TIME BY HOSPITAL

	For 2019 Week 52		Key:	High	Low/Best	
APOT Snapshot						
	ALS Transports	АРОТ	APOD Hours	APODs	APOD Compliance	
Corona Regional Med Ctr	192	67:35:17	11:51:45	37	80.7%	
Desert Regional Med Ctr	273	79:12:35	11:57:17	33	87.9%	
Eisenhower Health	296	49:36:41	0:26:30	4	98.6%	
Hemet Valley Hospital	327	151:14:17	29:49:51	119	63.6%	
Inland Valley Med Ctr	205	59:03:54	5:26:23	24	88.3%	
JFK Hospital	125	16:06:55	0:00:00	0	100.0%	
Kaiser Hospital Moreno Valley	62	20:32:09	3:57:52	10	83.9%	
Kaiser Hospital Riverside	118	50:40:45	15:09:56	25	78.8%	
Loma Linda Univ Med Ctr Mur	140	64:18:50	16:12:40	36	74.3%	
Menifee Med Ctr	88	41:18:28	12:02:42	26	70.5%	
Palo Verde Hospital	36	4:42:12	0:24:59	2	94.4%	
Parkview Community Hospital	132	43:35:20	4:52:22	25	81.1%	
Rancho Springs Med Ctr	89	25:45:38	2:17:56	9	89.9%	
Riverside Community Hospital	310	177:44:05	52:27:04	162	47.7%	
Riverside University Health System	360	122:34:52	8:52:43	57	84.2%	
San Gorgonio Mem Hospital	140	46:44:40	5:18:44	29	79.3%	
Temecula Valley Hospital	127	54:57:59	12:21:57	38	70.1%	
Totals	3,020	1075:44:37	193:30:41	636	78.9%	

# Transports and APODs by Hospital 2019 Week 52

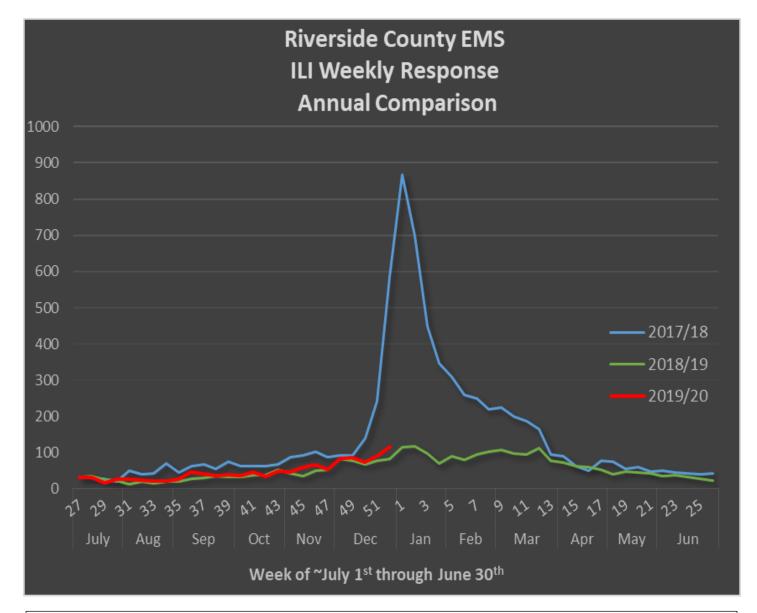

Page 4 of 8

## ILI - INFLUENZA-LIKE ILLNESS RESPONSE

The purpose of the REMSA ILI (Influenza-like Illness) trigger and report is to improve tracking of influenza-related activity and facilitate EMS preparedness in the event of a significant influenza surge event, similar or greater than that observed during the 2017-18 flu season.

The ILI trigger evaluates electronic patient report (ePCR) data using the following methodology:

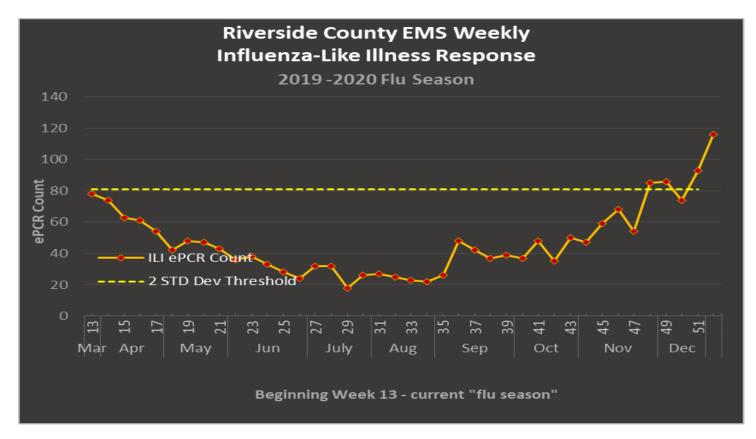

- 1. Filters primary or secondary impression of code J11 (Influenza due to unidentified influenza virus) OR
- A primary / secondary impression code J80, J98.09 (Acute respiratory distress syndrome, Respiratory disorder unspecified) with a match in the narrative for ILI, influenza like illness, Flu, Flu-, Flu\., or influenza OR
- 3. Any incident with a match in the narrative for ILI, influenza like illness, Flu, Flu-, Flu\., or influenza.

Week 41 (~October 1st) is defined by the Center for Disease Control (CDC) as the expected start of increasing influenza activity, or "flu season". Riverside County EMS Agency monitors influenza-like illness (ILI) year-round for better detection of seasonal or abnormal surges which can impact EMS utilization.

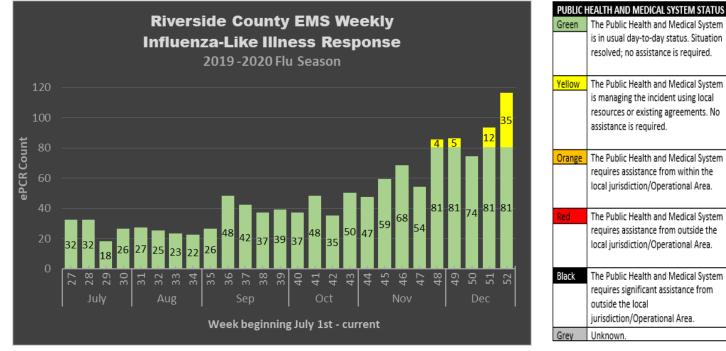

## ILI - INFLUENZA-LIKE ILLNESS RESPONSE (CONT.)

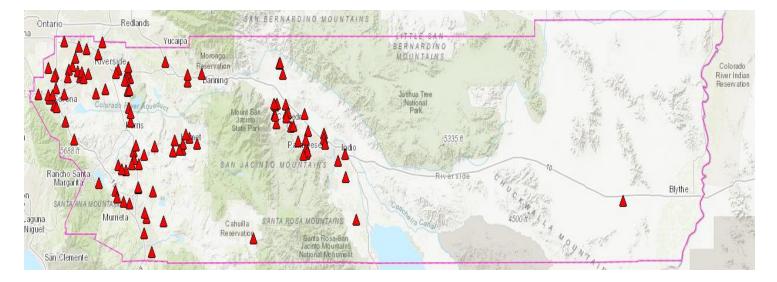

EMS ILI response two standard deviations above the calculated baseline average during non-peak flu seasons is considered a surge in flu activity. Surges are identified as color levels adapted from the *CDPH Standards and Guidelines for Healthcare Surge During Emergencies*:

https://www.cdph.ca.gov/Programs/EPO/CDPH%20Document%20Library/FinalEOM712011.pdf

In Week 52, EMS ILI response was 176.2% HIGHER than the baseline average of non-peak flu season activity levels (weeks 13-38) and was 24.7% HIGHER than the previous week.

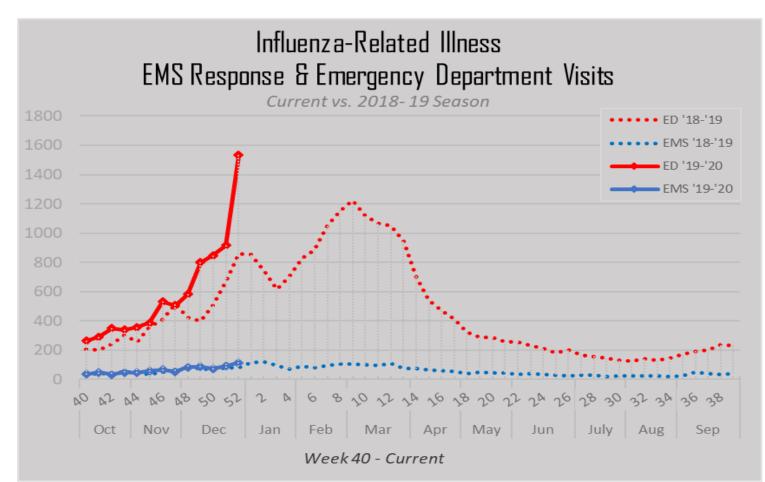

ILI-related EMS response in Riverside County, ePCR distribution map: Week 52 – Dec 22, 2019 through Dec 28, 2019

# RIVERSIDE COUNTY PUBLIC HEALTH ILI DATA

**Riverside County Public Health Department - DOPH** – collects Emergency Department ILI activity data from the Center for Disease Control's *Early Notification of Community-based Epidemics (ESSENCE)* system. The graph below provides a comparison between Riverside County's ILI-related EMS responses and Emergency Department (ED) visits for the current year compared to the previous year. As of November 2018, 14 of 17 Riverside County's EDs are participating in ESSENCE, noting that a minor subset of ILIs are missing from the ED data presented.

# APOT AND APOD DEFINITIONS

### Ambulance Patient Offload Time (APOT)

The Time interval between the arrival of an ambulance patient at an ED and the time the patient is transferred to the ED gurney, bed, chair, or other acceptable location and the emergency department assumes the responsibility for care of the patient.<sup>1</sup> The Clock Start (eTimes.11) is the time of patient arrival at the destination (hospital), and the Clock Stop (eTimes.12) is time the care of the patient is transferred.<sup>2</sup> REMSA obtains both times from the ePCR.

### APOT -1 Specifications

Criteria: All 911 transports to a hospital emergency department for which the patient arrival and transfer dates and times are "logical and present."<sup>3</sup>

Method: Aggregate of all transfer times and reported at the 90<sup>th</sup> percentile (the value for which 90% of the times are shorter).

#### APOD Compliance

Frequency comparison between the total number of transports and those resulting in APOD.

### Ambulance Patient Offload Delay (APOD)

Any delay in ambulance patient offload time (APOT) that exceeds the local ambulance patient offload time standard of 25/30 minutes (Riverside County EMS Agency applies a 30-minute standard). This shall also be synonymous with "nonstandard patient offload time" as referenced in the Health and Safety Code.<sup>4</sup> If the transfer of care and patient offloading from the ambulance gurney exceeds the 30-minute standard, it will be documented and tracked as APOD.<sup>5</sup>

### Data Definitions

Data in this report includes all transports to the 17 hospitals monitored by REMSA in the respective month relative to the date and time the incident originates (eTimes.03--Dispatch Notified Date/Time). For example, if an incident originates on June 30, and the patient is subsequently transferred to the care of an emergency department on July 1, that incident will be included in the month of June.

Canceled calls, calls for which both arrival and transfer times are not present, and calls with erroneous/negative offload times are excluded. Certain incidents with offload times exceeding six hours and 12 hours are verified for accuracy, and incidents are excluded if the timeline cannot be validated.

Data for this report has been collected from ePCRs (electronic patient care reports) from FirstWatch® and are available after they have been completed by the provider. There is, therefore, an inherent latency to the availability of these records. Due to this latency, subsequent reports may feature higher aggregate numbers than earlier reports for the same reporting period. The difference is insignificant (averaging less than .07%) and does not impact overall compliance.

EMS Data compiled by Sudha Mahesh and Catherine Farrokhi, Riverside County EMS Agency. ED Data compiled by Rick Lopez, Riverside County Department of Public Health.
